

SMART FITNESS TRACKER SYSTEM

PCCCS495 – Term II Project
Tanmay Singha

Introduction

A command-line based fitness tracker that logs workouts, calculates calories, and tracks progress using OOP principles.

Problem Statement

Users lack simple tools to track fitness. This system provides an efficient CLI-based solution.

Objectives

Develop a lightweight tracker, apply OOP, enable calorie calculation, and ensure data persistence.

Target Users

Fitness enthusiasts, students, beginners, CLI users.

Core Features

Workout logging, calorie calculation, summaries, JSON storage, CLI interaction.

OOP Concepts

Abstraction, Inheritance, Polymorphism, Exception Handling, Collections.

Implementation

Java-based CLI system with file handling and modular design.

How to Run

cd src → javac Main.java → java Main

Conclusion

A simple and effective OOP-based fitness tracking system.
